

# A SECOND CHANCE

*Posed by model*

Did you know that the effects of the abortion pill can be **REVERSED** after the first tablet is taken?

And that this method of reversing an abortion is **SAFE** for **BOTH** mother and baby?

## WHAT DOES THE ABORTION PILL DO?

**Most abortions up to 12 weeks of pregnancy are now carried out using the abortion pill – although two tablets are actually involved.**

The first pill is called mifepristone. This blocks the effects of a natural hormone called progesterone. This hormone is produced by the woman in order to provide the essential nutrients for the developing baby to thrive.

So when the effect of progesterone is blocked, the woman's body no longer thinks she is pregnant, and stops providing those essential nutrients. Starved of nutrients, the baby will start to fail.

Then a second drug, misoprostol, is taken up to 48 hours later. This causes painful cramps to expel the baby's body.

## REVERSING THE EFFECT OF THE FIRST PILL AND SAVING BABY

**But what most women don't know is that there is a medical procedure which can reverse the effect of the first pill.** Many women, sometimes only minutes after taking the first pill, think *"this was a mistake. I don't want to harm my baby"*.

Abortion pill reversal offers that second chance. Because the first abortion pill simply **BLOCKS** the effect of progesterone which nourishes the baby, there's a safe and tested way to reverse that. To **REVERSE** the effect of that first abortion pill then, doctors give a prescription of progesterone to **COUNTERACT** those effects.

In fact, using progesterone has been used in this way for decades to prevent miscarriages. This is a very effective treatment – and providers say it works up to 70% of the time, with **NO** harmful side-effects for either mother or baby.

## WHAT DO DOCTORS SAY?

Doctors across the world are now providing Abortion Pill Reversal.

### SAFE FOR MUM AND BABY

“The process is safe for both the mother and for her unborn child, and offers a real chance for the woman to rescue her unborn child when she has changed her mind about abortion,” says the American Association of Pro-Life Obstetricians and Gynecologists.

They point out that “Natural progesterone has been used for over 50 years in the treatment of early pregnancies who are threatening to miscarry”.

And it’s **SAFE** for baby: They also found that when abortion pill reversal was successful there “have been no increased risks of birth defects noted” for baby.

Dr William Lile OBGYN of the Abortion Pill Reversal Network says that their records show that reversing the effects of the abortion pill is **successful up to 70% of the time.**

## WHAT WOMEN SAY

### Emily

“I took the pill and I cried the whole way home. I wanted to fix it and reverse it somehow. We came across a website discussing a reversal process, and it had a phone number.

Everything fell into place after that and I remember hearing my son's heartbeat for the first time. I hope everyone when faced with this choice chooses life, but thankfully, if they make a mistake like mine, there's a second chance, which is the reversal process”.

### Shanae

“Without [abortion pill reversal], I would not have my beautiful baby boy. Something told me to look online for a cure and to look for it fast. I spoke to an APR Hotline nurse, and she located the nearest doctor that could help us. My doctor prescribed me progesterone. My baby was okay and alive. I felt him moving, I was filled with joy”.

If anyone out there is thinking of aborting, or possibly already took the first step that you thought you wanted to take, there is a way to fix it. **Don't lose hope, don't give up on your baby's life.**”
